

TAKE RISK MANAGEMENT TO THE NEXT LEVEL WITH THE FMEA MODULE!

Easily analyze potential risks and effectively manage preventive actions with our new AIAG-VDA compliant FMEA module.

User-Friendly Interface

Our new module offers a more user-friendly experience with its advanced interface. By simplifying complex processes, it helps make your management workflow more efficient.

Linked Structure Analyses

From functional analysis to risk assessment, and from optimization to action planning, you can follow all steps in an integrated manner. Our new structure enables faster and easier access to every stage.

Action Plans and Task Assignment

For every FMEA risk you identify, you can create action plans and assign tasks to responsible individuals, enabling you to manage the process effectively. This allows for more efficient and timely actions in risk management.

Action Priority Calculation

By automatically calculating the Action Priority (AP) value based on likelihood, severity, and detectability scores, you can plan your actions in the correct order of priority.

Parallel Operation with Control Plans

You can update your FMEA simultaneously with control plans and manage both forms in parallel. This way, you can monitor the current status of your processes in real time.

Generic FMEA Management

You can use your generic FMEA data integrated across different products and common processes. This way, you can easily share information among products with shared processes, making FMEA management more effective.

Additional Features:

- **Corrective and Preventive Actions**

You can improve your processes by quickly correcting potential errors and actions.

- **Customer Complaints**

You can easily integrate customer feedback and simultaneously track actions related to complaints and FMEA processes.

- **Integrated Operation with Process**

You can design your synoptics in the Process Management module and link them with your FMEAs. After making changes to the process, you can assign review tasks to your FMEAs.

DIGITAL FMEA MANAGEMENT NOT ONLY IMPROVES QUALITY BUT ALSO DIRECTLY INCREASES PRODUCTION SPEED AND PROFITABILITY!

Benefits of Digital FMEA Management:

Time Savings

- Creating, updating, and revising FMEAs digitally is **faster** compared to paper or Excel methods.
- Version control and approval processes become automated, reducing meeting **durations**.

Traceability and Compliance

- Compliance with quality management systems such as ISO 9001 and IATF 16949 **improves**.
- Preparation time for audits and customer inspections is **reduced**.

Error Reduction

- Manual data entry and tracking errors **decrease**.
- Increased visibility of risks leads to early detection of critical faults, resulting in **fewer** quality problems.

Knowledge Management and Corporate

- Instant access to past FMEA records **reduces** repeated errors in new projects.
- The risk of information loss is **minimized** in case of expertise loss (personnel changes).
